

GROUND AWARE®

MOBILE LX

INTEGRATED SOLUTION, READY TO USE IN MINUTES

Skid-mounted tower

- 30' single push mast (cylinder extends/retracts mast full 30' with single push of controller)
- 30' mast deploys/recovers in approximately 3 minutes
- 30' mast on mobile platform lifts 1000 lbs.
- 30' mast on static platform lifts 2500 lbs.
- 30' mast constructed of aluminum square tube slid together using UHMW plastic shims
- Optional Dodge 2500 long bed gas 4x4 pick-up truck

7' Sensor platform:

- Lifts 800 lbs.
- Articulated to allow payload storage in vehicle enclosure for security
- Electric actuated

Enclosure:

- Aluminum shelter structure with max dimensions of 8'W x 8'T x 11'L
- Automated shelter cover for security and equipment storage

GroundAware® Mobile LX is a newly designed highly durable mobile surveillance platform, featuring an innovative and versatile skid platform that simplifies and expedites truck-borne and static deployments of GroundAware Surveillance Sensors, video cameras and other security assets.

GroundAware Mobile LX is available either fully equipped and mounted in a truck bed or in a standalone skid configuration.

GroundAware Mobile LX uses the truck's power and a power inverter system to provide electric power for the skid platform and all surveillance assets. For static mountings where truck power systems are unavailable, standard generators or shore power can be used to provide necessary electric power.

Communications options supported include LTE, point-to-point and satellite. Surveillance assets supported include the entire family of GroundAware Surveillance Sensors, video cameras from vendors of choice and a range of other security assets as required to meet security requirements.
